

Did You Know?
90%

Surveys show 9 of 10 people agree that they are more likely to have an overall negative opinion of an independent business if public spaces are not clean.

Premier Surface Prevention Program

MicroShield 360 is an advanced coating system that imparts durable biostatic activity to a wide variety of substrates.

This antimicrobial coating system creates an invincible barrier to inhibit the growth of bacteria which can cause staining and discoloration.

The coating also prevents mold & odors from forming.

MICROSHIELD 360 COATING SYSTEM

- Use of **MicroShield 360 Renew** for surface preparation
- **MicroShield 360 Antimicrobial** creates final finish

BIOSTATIC PREVENTION

- Coating polymerizes across surface and creates a non-leaching finish that prevents growth
- Continue normal cleaning protocols to remove dirt and debris so coating is exposed and working

95%

Surveys show 95% of consumers agree that cleanliness can make a good business great.

Perception Matters!

MicroShield 360 Application Process

- 1 Cleaning of High-Risk Surfaces Prior to Application
- 2 Application of MicroShield 360 Coating System – Dries in Minutes
- 3 Implementation of Marketing Assets to Create Public Awareness
- 4 Continue Normal Cleaning – Durable Biostatic Coating Now Bonded & Working

EPA REGISTERED
FDA APPROVED*

"We partnered with MicroShield 360 to protect the surfaces within our planes and facilities. This decision gave our owners and pilots peace of mind that Flexjet took a proactive and innovative approach to their safety and well-being."

Megan Wolf - COO • Flexjet

You are now
PROTECTED.

MicroShield 360
